Northampton Community College
CISC231 – Cabling Lab
Post Installation Self Evaluation

Over the last week we discussed the theory of installing Cat. 5 cable. We learned about the standards that should be followed and evaluated some exceptions. Then you had the opportunity to plan and install cabling. Hopefully this was a good experience. Please answer the following questions based on your experience.

1. Did you actively participate in the planning process? Explain your contribution to the group. If not involved, why?

2. Did you actively participate in the installation? Explain what you did.

3. During your installation, were there any “surprises” or problems that you did not expect to encounter? Explain. What did you do to overcome this problem?

4. There are always problems when installing in an existing structure. What were some of the exceptions to the standards that your group made? Explain why you made these exceptions and describe some alternatives that you could have taken.

5. Was the lab a learning experience for you? Why or why not?

6. Please provide any suggestions that you feel would make this a better experience.
